No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOf' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including Ecor I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcorI which site is also included in vector. An RNA strand

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BF724180.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human.
/note-"Organ: Eye; Vector: pcMvSpORT6; Post-mortem iris tissue was pooled from 10 individuals ranging in age from 4-80 years and RNA was extracted. From this pooled sample an aliquot of 60ug of total RNA yielded 2.17ug of mRNA. A directionally cloned cDNA library in the pcWSpORT6 vector was constructed at Life Technologies, essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTTCTAGATCGCGAGCGGCCCC(T)15-3'

NCI_CGAP_DF1 is a normalized cONA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into py773-Pac vector. The oligonucleotide used to prime sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TAG_SEQ=GTTAAGCGTC"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_DIO is a cDNA library containing the following tissue(s): A pool of Lung Focal Fibrosis. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA

                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB seq

The present invention relates to recombinant human proteolytic CC tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives capression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active cc beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the CC protease and its enzymatic activity, and for modelling studies. The CC cand in drug screening for compounds which act as tryptase inhibitors, CC antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant tryptase actives site mutants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 771
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tryptase,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                     producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the method

CC This sequence encodes the human beta-tryptase. The invention relates to a CC DNA expression construct comprising (5' to 3') a promoter linked to a CC signal sequence which is linked to a sequence encoding human CC beta-tryptase. The DNA construct is useful for transforming host cells to CC express, post translationally process and secrete enzymatically active chuman tryptase with defined specifications. The transformant is useful for the production of large amounts CC of tryptase with defined specifications. The transformant is useful for CC pharmacological studies, combinatorial library screens and X ray CC crystallographic studies. The tryptase produced allows for the CC development of tryptase agonists and/or antagonists, is useful as an CC antigen to generate antihuman tryptase antibodies in various animals, CC can be used in screening for compounds which act as tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists cetc. may be useful as therapeutics. The tryptase does not require any CC post-expression or post-purification modifications or manipulations to initiate tryptase activity and it has enzymatic activity which compares CC favourably with cadaveric tryptase. The availability of enzymatically active tryptase facilitates the large scale screening of combinatorial CC libraries for specific tryptase. The tryptase can be used to detect low mast cell mediated diseases. The tryptase can be used to detect low cc levels of tryptase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antiagonists, agonists, etc. The present sequence encodes for recombinant human beta-II tryptase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 771 BP; 149 A; 256 C;

                                                                             Q
                                                                                                                                                                    The present invention relates to recombinant human proteolytic CC tryptases, active site mutants of these tryptases and the methods for CC producing these. The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives CC expression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the CC protease and its enzymatic activity, and for modelling studies. The CC enzymatically-active, recombinant proteolytic tryptase produced are CC useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, CC antagonists, agonists, etc. The present sequence encodes for human
                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to recombinant human proteolytic cryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies antigonists, agonists, etc. AAS20795-AAS20790 encode for recombinant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     망
                        The present invention relates to recombinant human proteolytic CC tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal construct comprising a promoter operably linked to a secretion signal construct comprising a promoter operably linked to a secretion signal construct comprising a promoter operably linked to a secretion signal construct of a mature proteolytic tryptase mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity construct). The method is useful for producing enzymatically-active construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the corollar constructive, recombinant proteolytic tryptase produced are constructive, recombinant proteolytic tryptase produced are cuseful as an antigen to generate anti-human tryptase antibodies cand in drug screening for compounds which act as tryptase inhibitors, antiagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant constructives.
                                                                                                                                                                                                                                                                                                                                                                       DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase an active site mutation -
                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                                                                    CC producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal cc sequence which is operably linked to a DNA sequence encoding a cc proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity cc due to the active site mutation, in hosts transformed to contain the cc construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide cc beta-II tryptase. The active site mutants of proteolytic tryptase provide cc a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The cc enzymatically-active, recombinant proteolytic tryptase produced are cc useful as an antigen to generate anti-human tryptase antibodies cand in drug screening for compounds which act as tryptase inhibitors, and candists, agonists, etc. AAS20775-AAS20790 encode for recombinant tryptase antibodies candiscipate the structural site mutants.

           The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are
                                                                                                                                                                                                     Claim 7; Page 91-92; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                 Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to recombinant human proteolytic CC tryptases, active site mutants of these tryptases and the methods for CC producing these. The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives CC expression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the CC enzymatically-active, recombinant proteolytic tryptase produced are CC enzymatically-active, recombinant proteolytic tryptase antiodies. The CC enzymatically-active, recombinant proteolytic tryptase inhibitors, and in drug screening for compounds which act as tryptase inhibitors, thuman tryptase antiodies. AAS2075-AAS20790 encode for recombinant tryptase inhibitors, thuman tryptase inhibitors.
